MEI CYBER GUARD

How safe is your worksite? Managing construction, commercial and energy site property loss whether in a highly populated area or remote locations with little or no access to power requires vigilance on your part as well as a solidly written and communicated plan of action.

If an incident occurs, are you reliant solely on eye witness accounts? You and your safety team will have access to archived time lapsed or streaming video to assist you in an essential lock down of the facts, guaranteeing efficiency in your field investigations.

CLIENT BENEFITS FROM REMOTE SITE MONITORING:

- Deter and avert theft, vandalism or mischief
- Achieve potential insurance savings:
 - Enhance risk management to achieve Zero Accidents
 - Reduce incidence of work site theft
- Monitor project goals:
 - Visual real-time site progress reports
 - Simultaneous multiple site coverage
 - No travel to site required
 - Active management of project and disputes

US Based MEICyberCorp Staff

“As a company, we are not asking our clients to adapt their s rather we look to design products and services that meet

Single Source Solution for Remote Monitoring S

The **MEICyberGuard** Mobile Surveillance Units (MSU) come with customized combinations of cameras and analytics to address the unique needs of our clients. Camera options include Standard or High Definition, Fixed, Pan-Tilt-Zoom, and Thermal, Day &/or Night viewing.

The MSU provides remote monitoring, security and safety solutions that are **wireless, mobile, solar powered, cost effective and customizable.**

Have a "hot spot" within your project site? Remote configured "digital fencing" is available to send alerts and actions should a breach in the perimeter of the virtual digital fence occur.

Need to relocate a unit? Simply place a call and MEI schedules a relocation of the unit to your new site.

Our clients have the ability to monitor, react and **take control of an emergency situation.** This allows for immediate response from decision makers to protect employees, safely secure the worksite and identify potential threats that may result in property damage. The end result for our clients saves critical time in emergency situations and money in the deterrent of theft or vandalism.

PRICING TO FIT YOUR BUDGET

With our flexible rental or long term lease programs, MEICyberCorp can structure the best model and leasing options to fit your budget.

systems to our products, their unique needs."
Security and Safety

MEI CYBER GATE

MEICyberGate is leading the way in remote site safety and security applications in the oil and gas, demolition and mining industries. Our product is deployed in remote, rugged areas to protect hot spots and critical infrastructure. MEICyberGate is engineered for continuous observation and hazardous duty situations. The portable and secure unit replaces the need for maintaining a costly on-site guard force that may call off duty or get sick leaving the site vulnerable to unauthorized personnel.

CLIENT BENEFITS

- Simple intuitive software experience
- Cost Savings with elimination of site specific security personnel
- Cloud based access to management from any location
- Accurate, instantaneous audit tracking
- Live and Time-lapsed monitoring
- Time lapsed monitoring of user created preset views
- Client determined access controls for live viewing
- Video archiving
- Tablet or smart phone viewing of site and action alerts

KEY FEATURES

- Provides face-to-face off-site monitoring and security validation 24/7.
- Immediate count of individuals on an Active Site in the event of a safety or security event where time is of the essence in accounting for all persons.
- Gate entry and exit software can be programmed to use most company issued ID cards.
- Manifest numbers for products being brought on or off site can be electronically entered at the Gate and immediately uploaded into the Client's Finance department.

OUR HISTORY...

For over four decades MEI has provided electrical, safety, security, and telecommunication services. Our commitment to our clients is to serve as an ally, advisor and mentor while offering the best solution to meet your safety and security needs. We achieve this by blending the boundaries of technology with the range of telecommunications and surveillance equipment used for safety and security solutions.

The MEICyberCorp division offers a cloud based monitoring service through its various products, MEICyberGuard, MEICyberGate and MEICyberLock systems. Leading the way in remote safety and security applications efficiently replaces the need for a physical guard and helps to deter theft, vandalism and loss.

As the needs of clients change, MEI is adapting to those changes. Paul Morocco, Owner and President, believes, "As a company, we are not asking our clients to adapt their systems to our products, rather we look to design products and services that meet their unique needs."
